MISSING NUMBERS.

Subscribers are requested to look over their files, and, if any numbers are needed to complete the same, to apply for these **at once**. Complete sets of OPHTHALMIC LITERATURE will be valuable. Its index of publications will not be duplicated in the OPHTHALMIC YEAR BOOK; and, containing one-third more titles than the corresponding department of the INDEX MEDICUS, it will increase in value with time.

INDEXES.

Although OPHTHALMIC LITERATURE is largely an index, the facility with which it can be used is increased by the complete indexes included in the present number. The index of authors requires no explanation. That of subjects is somewhat more complex, but resembles closely the ordinary book indexes of the better type. If you do not find a subject indexed by a particular word, do not jump at the conclusion that it is not mentioned in the index. For instance: Under A there is no mention of absorption of cataract; but under "Cataract" is "absorption, 37, 51, 140, 155." To prevent an index from being unwieldy, and at the same time make it complete, it is necessary to avoid duplication as much as possible; and this is sought by an appropriate grouping of references.

In regard to **abstracts** a full explanation has been made on page 18. It should be born in mind that under this heading of abstracts are often included translations, or repetitions of the full text of the article, or continuations of it in subsequent issues. To find if an article published in a foreign journal has been translated or abstracted into English, turn to the Index of Authors, in which the brackets enclose pages on which abstracts are mentioned.

BOOK NOTICES.

Book reviews constitute an important and interesting department of the literature of ophthalmology. Any important book is likely to be noticed in several different journals, but not simultaneously. While the most important new books are mentioned in OPHTHALMIC LITERATURE as soon as possible after publication, we give in the present number a complete list of these, and of others not heretofore mentioned, with references to the reviews of them appearing in all English ophthalmic journals. We cannot, in such a list, follow the practice of including other works, which may be of interest to the ophthalmologist, but do not deal directly with ophthalmology.
